

a new beginning  
in therapy choices

## Connected care

Every AirSense 10 device seamlessly connects to a new cloud-based patient management system, AirView. So healthcare professionals, including physicians, can now rely on one integrated system to provide all the information needed to effectively manage patients. AirView also offers the capability to change device settings and troubleshoot remotely. Thanks to its remote assist feature, common therapy questions can be addressed and resolved in minutes.

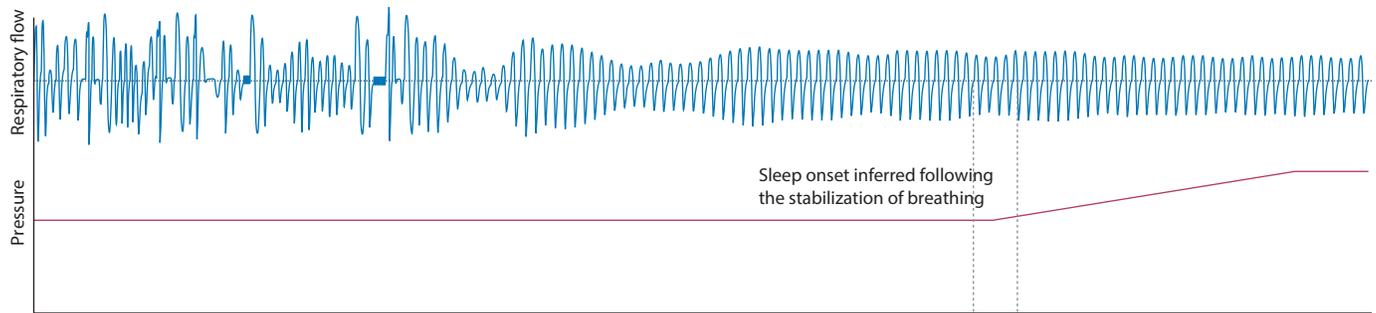

Patients can also benefit from an extra layer of support with myAir™ — an exciting new online program that offers tailored coaching, education and motivational tools to help engage them in their therapy.

## Integrated humidification

Heated humidification is a standard feature built in to all AirSense 10 therapy devices. So with fewer parts to set up and manage, therapy becomes simpler for you and your patients. And with Climate Control's enhanced Auto option, patients can simply attach the heated tube and press Start on their device to receive the ultimate in therapy comfort. There are no settings to change and no complicated menus to navigate.

## Intelligent detection

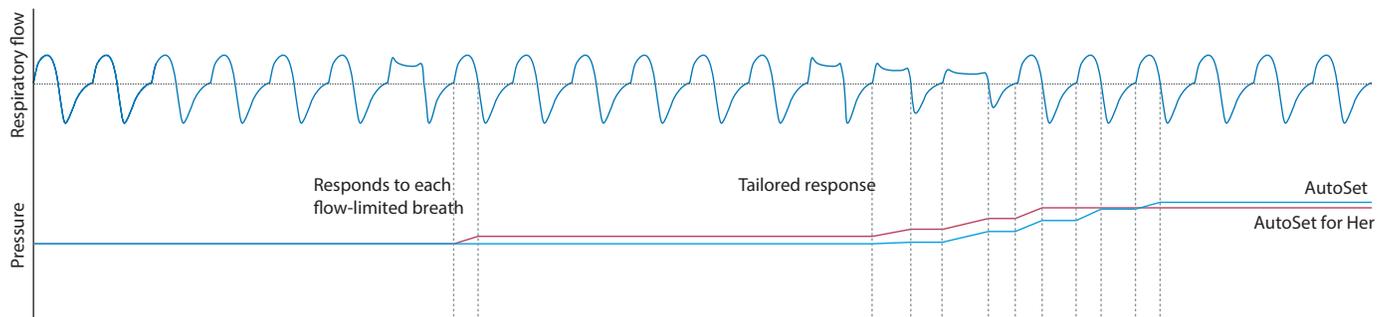

Our new AutoRamp feature with sleep onset detection is designed to make therapy as comfortable as possible from the moment your patients turn on the device. It works by delivering a low pressure to help them fall asleep with ease. Once it detects they're asleep, it comfortably ramps up the pressure to ensure the prescribed level is delivered the moment they need it.

Our AutoRamp feature with sleep onset detection ensures patients get their prescribed therapy the moment they need it.

## Unique therapy for women

Although nearly 40% of newly diagnosed sleep apnea patients are female, there has never been a therapy designed specifically for women — until now. The AutoSet for Her therapy device intelligently addresses the unique therapy needs of women with the first dedicated algorithm designed to treat mild to moderate obstructive sleep apnea (OSA) in female patients. Taking into account the higher instances of flow limitation often seen in women with sleep apnea, the AutoSet for Her mode offers a tailored therapy solution for your female patients.

How the AutoSet for Her algorithm responds to flow limitation.

## Clear insight

The series includes central sleep apnea (CSA) and Cheyne–Stokes respiration (CSR) detection to provide treating physicians valuable insight into the continued health of your patients. The algorithm has been designed to identify indications of CSA and CSR, which you can monitor through AirView, to quickly and accurately provide patients with information to seek the right treatment.

### AirSense 10 CPAP

Basic fixed-pressure device with integrated humidifier and wireless communications.

### AirSense 10 Elite

Premium fixed-pressure device with integrated humidifier, wireless communications and advanced event detection.

### AirSense 10 AutoSet

Premium auto-adjusting pressure device with integrated humidifier, wireless communications and advanced event detection.

### AirSense 10 AutoSet for Her

Premium auto-adjusting pressure device for female patients. Also includes an integrated humidifier, wireless communications and advanced event detection.

Device	Therapy modes			Advanced event detection			Comfort features				Data management		Patient engagement	
	CPAP	AutoSet	AutoSet for Her	Cheyne-Stokes respiration detection	Central apnea detection	RERA reporting	AutoRamp	Climate Control	Expiratory pressure relief (EPR™)	SmartStart™	Built in wireless technology	AirView	AirView's remote assist	myAir
